

M/Y SURINA COVID-19 SANITATION PROTOCOL

VESSEL: M/Y SURINA | **MASTER:** BRYAN ANTILL

Due to the coronavirus pandemic, for your safety and convenience the M/Y Surina crew has compiled the following protocol to reduce possible spread of Covid-19 onboard the vessel and increase safety to guests and crew.

We would like to ensure all guests that the crew takes every precaution to ensure the vessel is run in a safe and hygienic manner each season as we are committed to providing a safe and enjoyable experience on board. We continually monitor new developments regarding the spread of onboard medical and safety threats with 24/7 advice and assistance from our support partners.

PREVENTION

As we are a private vessel used only for the enjoyment of our guests, we do not allow the boarding of un-authorized persons. We are continually vigilant in the movement of crew, guests and goods.

Due to the threat of Covid-19, the crew has adopted stricter measures regarding the persons and parcels delivered to the vessel. This includes hand sanitizing, temperature checks of all persons entering the vessel, and all parcels, equipment and packages being sanitized prior to coming onboard.

1. The interior of the vessel is always maintained to the highest standards of sanitation and cleanliness. The vessel is cleaned throughout the day with a variety of virus eliminating disinfecting products. While guest staterooms are not in use, they are regularly cleaned, linens changed, and disinfected to make sure that they are sanitized. All bathrooms on the vessel are cleaned and disinfected daily. Deep cleaning in all areas and amenities inside and out is our daily standard procedure.
2. With heightened awareness of the COVID-19 virus, all high traffic areas and boarding arrangements are disinfected at regular intervals.
3. Between charters (or between an owner's use), the entire vessel is "turned over". This means that all bed linens are washed on a hot cycle and all surfaces are vacuum-dusted to remove dust, dander and thereafter wiped down and disinfected.

Sanitation methods include:

4. Disinfectant fogger to sanitize -
 - Any provisions which will come onboard.
 - Pre boarding cleanse of the Guest & Crew areas

5. UV Lamp (Ozone) to sanitize easy to ventilate areas such as -
 - Main Salon
 - Sky Lounge
 - Galley

GUEST/CREW PARTICIPATION

To maintain a strict sanitary level, we rely on the active participation of each guest and crew member in consistently practicing principles of good hygiene, including but not limited to:

- Washing hands frequently and correctly.
- Ample protection and disinfection supplies are stocked onboard such as approved masks, Nitrile gloves, hand sanitizer gel, disinfecting wipes, etc.
- Guest clothing will be disinfected upon boarding. Guest clothing, beach towels, etc., will be washed after any trip ashore or to the beach. The interior team will be standing by to assist.
- Guest luggage, purses, bags and street shoes will be sanitized before being carried onboard.
- Social distancing / use of masks ashore is critical.
- Provisioning bags/crates/cartons and foods/bottles, etc. will be sanitized before carried aboard.

CONTAINMENT

Early detection is important to prevent the spread of the virus. As part of our medical preparedness, the Captain has been trained to the level of MPIC (Medical Person in Charge). This in-depth training, along with our subscription to Medlink by MedAire*, provides the vessel with serious, professional backup to deal with any suspected virus or health matter aboard.

MedAire is a 24 hour support line that connects us directly with doctors to diagnose a problem and give recommendation in any situation. During a charter, any guest with suspected symptoms of the virus will be quarantined in the comfort of his/her stateroom until we are able to have the guest transported to a medical facility ashore.
